PHARMACOVIGILANCE STANDARD OPERATING PROCEDURE

ICSR Case Processing Cycle & Timelines

An end-to-end overview of Individual Case Safety Report (ICSR) management from adverse event receipt to regulatory submission.

1. Regulatory Reporting Timelines

FATAL / LIFE-THREATENING

7 Days

Expedited reporting window starting from Day 0 notification.

SERIOUS CASES

15 Days

Mandatory reporting timeline for non-fatal serious adverse events.

NON-SERIOUS CASES

90 Days

Standard timeline for aggregate and non-serious case submission.

2. Core Case Processing Workflow

1 **Triage** — Timestamp 1:26

Validates incoming adverse event reports, performs duplicate searches to prevent redundant entries, and registers valid cases in the global safety database. **Establishes "Day 0"**—the official clock start for regulatory submission deadlines.

2 **Data Entry & Coding** — Timestamp 1:52

Accurate manual entry of patient demographic, medical history, and event details. Medical terms are standardized using the MedDRA dictionary, suspect and concomitant drugs are coded, and a detailed case narrative is drafted.

3 **Quality Review (QC)** — Timestamp 2:29

A rigorous quality audit ensuring completeness, data consistency, and appropriate MedDRA coding. Verifies that all mandatory fields are correctly populated prior to medical assessment.

4 **Medical Review** — Timestamp 3:03

Conducted by a qualified physician. Evaluates drug-event causality, assesses overall seriousness criteria, checks expectedness/labeledness, and provides definitive medical commentary.

5 **Regulatory Submission** — Timestamp 3:23

A submission associate conducts a final technical validity check, generates standardized reporting formats (e.g., E2B XML), and transmits the report to global health authorities.

3. Role Requirements & Qualifications

Functional Roles	Minimum Qualification	Experience Requirement
General Case Processing (Triage, Data Entry, QC)	Life Science Degree (Pharmacist, Nurse, Dentist, B.Sc)	Minimum 1 year relevant PV experience (Timestamp 4:01)
Medical Reviewer	Medical Doctorate (MBBS or MD)	Clinical & regulatory expertise in causality assessment (Timestamp 4:18)
